

PT INR (PT-INR)

@ ₹450/-

Significance

Prothrombin Time (PT) test measures the time taken for blood plasma to clot as well as the level of blood-clotting proteins. If you are taking the blood-thinning medication, the prothrombin time is shown as an international normalised ratio (INR). The test is performed to check for liver damage or cirrhosis, assess any risk of internal bleeding and monitor the effectiveness of blood thinner medicines. It is also done to diagnose blood disorders.

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**#

CAP
